SCHOOL HEALTH, CONNECTED

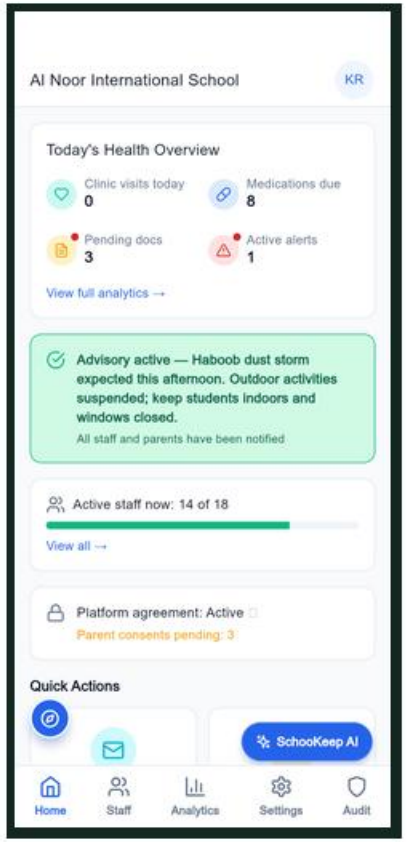

SchooKeep

A shared operating layer for school health, family communication, and student safety.

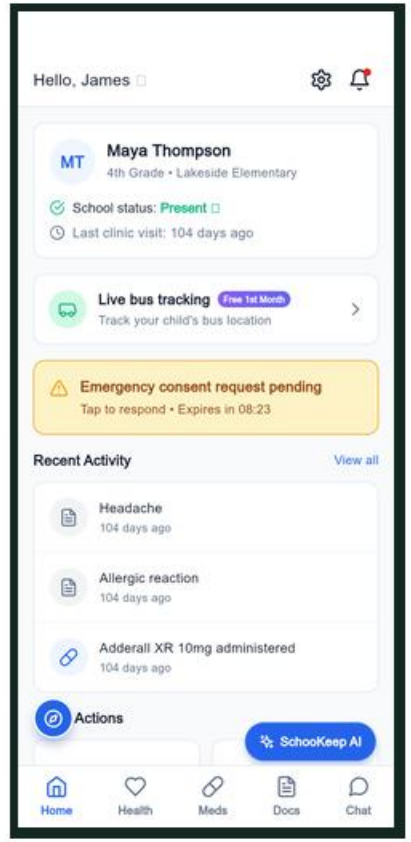

Better handoffs.
Clearer accountability.
One school community.

Flutter product demonstration

Local demo data, captured from the running app

School leadership

Parent experience

Care breaks down between handoffs

The product addresses coordination gaps across the school day.

01

Fragmented context

Clinic notes, consent, medication status, and pickup instructions sit in different workflows.

02

Time-sensitive decisions

A health event often requires the nurse, parent, teacher, and leadership to act on the same information.

03

Limited visibility

Schools need a clear operational view and a traceable record of who acted and when.

A connected school health workspace

Role-specific mobile screens bring each team into the same operating model.

01

Coordinate care

Clinic visits, dose workflows, physician review, and student health records.

02

Connect families

Consent, documents, health history, medication reporting, and authorized pickups.

03

Close the loop

Leadership analytics, staff permissions, school advisories, and audit views.

Built around the whole school

Eleven role experiences, with shared authentication and system states.

- Principal
- Vice principal
- Nurse
- Physician
- Parent
- Teacher
- Counselor
- Secretary
- Cafeteria
- Security
- Bus driver

148 route screenshots included in the product library.

See the school health picture

A daily overview brings care activity, documents, alerts, and staff visibility together.

An operational home

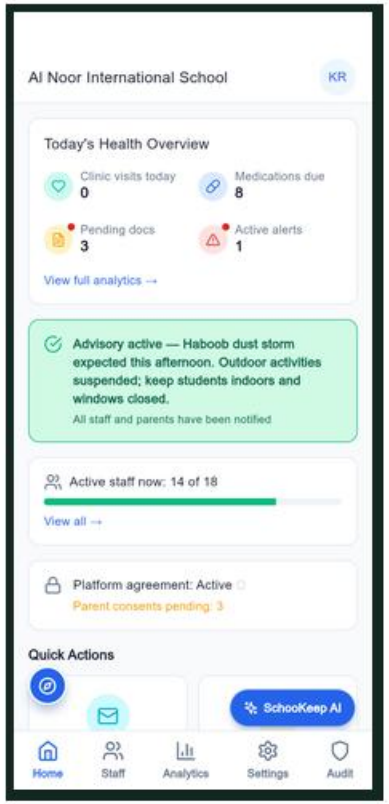

Bring today's priorities into one leadership screen.

Staff and access oversight

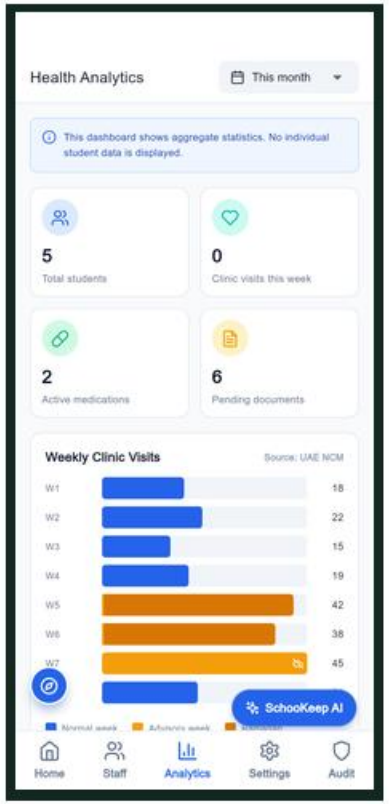

Manage the people who deliver each part of the service.

Analytics and reporting

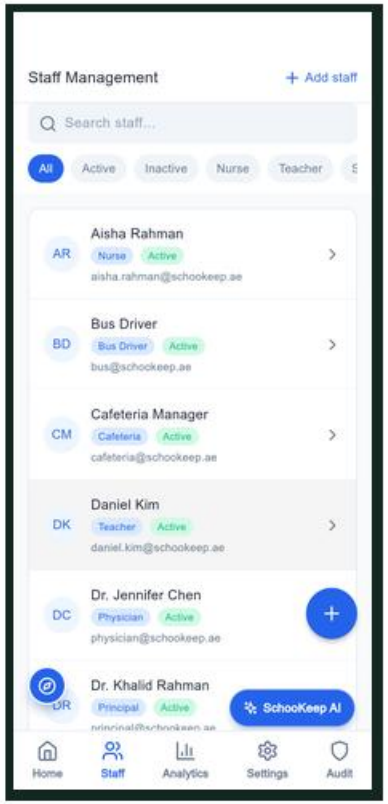

Review trends and support school-level planning.

Daily overview

Health analytics

Staff management

Give the nurse a focused workspace

Clinical operations span student lookup, visits, documentation, and emergency escalation.

Student health context

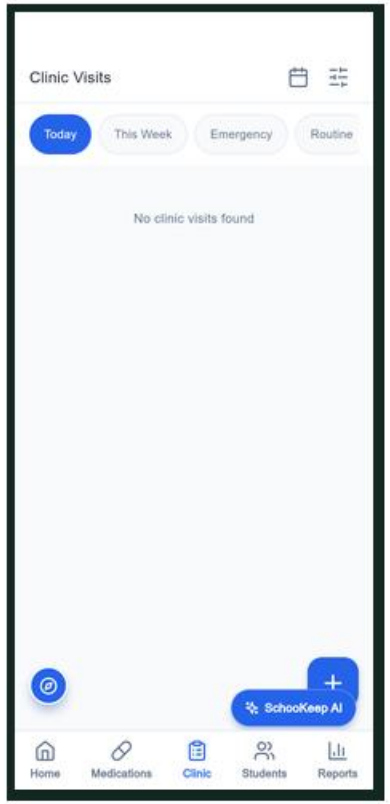

Access health information alongside the student record.

Visit documentation

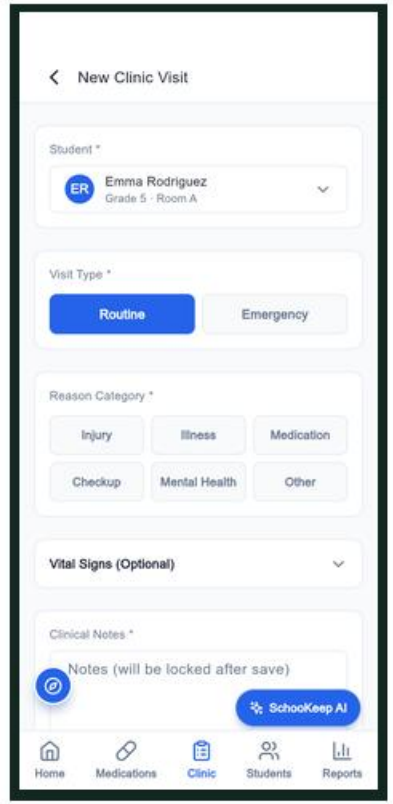

Organize routine clinic activity and visit details.

Escalation paths

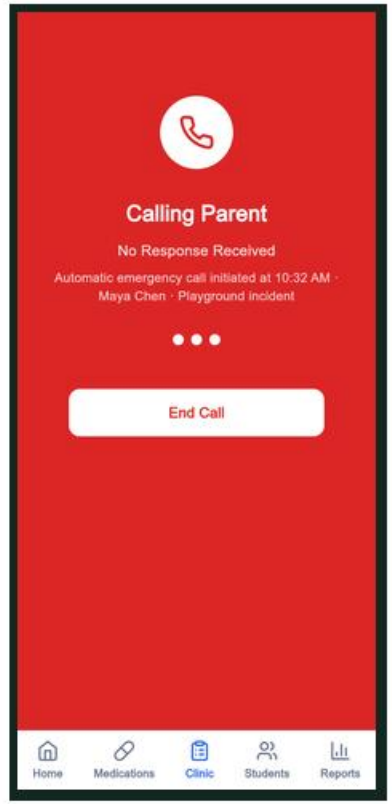

Make urgent next steps visible in the workflow.

Clinic visits

New visit

Emergency escalation

Make each dose a deliberate action

Daily doses, conflict states, and inventory are represented in the clinical experience.

Plan the day

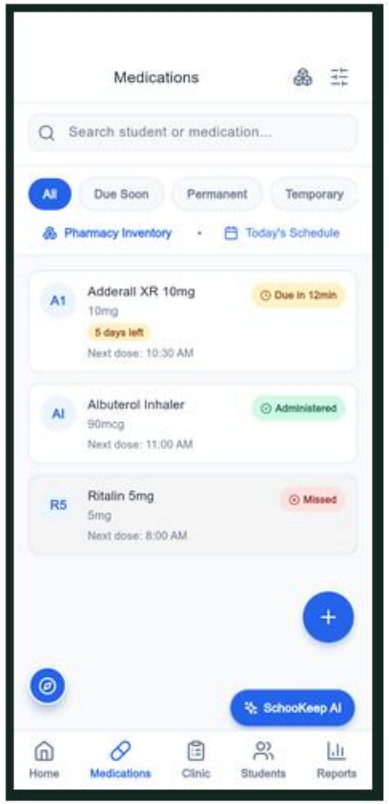

Review medication work in a dedicated dose view.

Confirm and flag

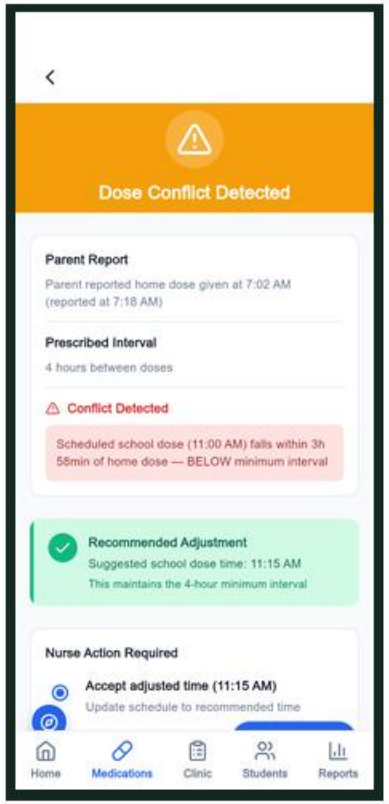

Use confirmation and dose-conflict screens to structure the handoff.

Track supplies

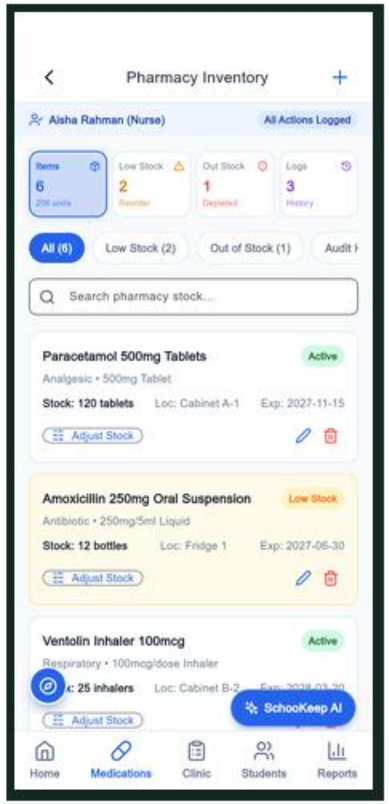

Give medication stock its own operational view.

Medication list

Conflict alert

Pharmacy inventory

Extend care beyond the clinic desk

A physician workspace supports protocol review, escalations, and scheduling.

Protocol review

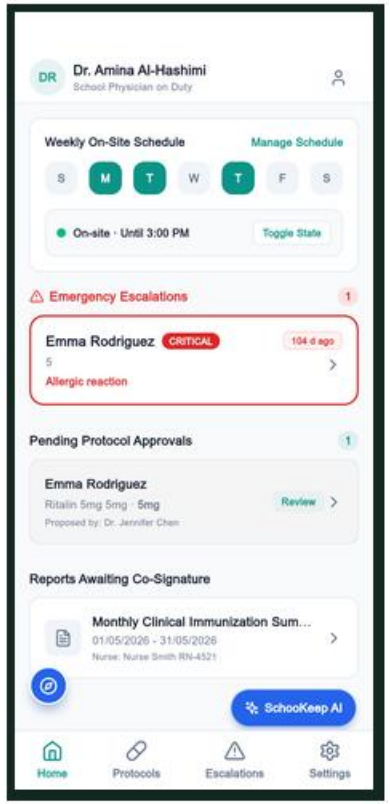

Provide a dedicated review area for medication protocols.

Clinical escalation inbox

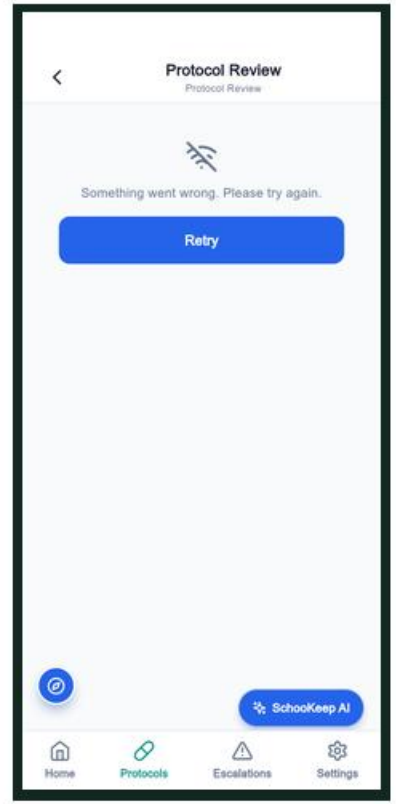

Surface cases that need additional clinical attention.

Availability planning

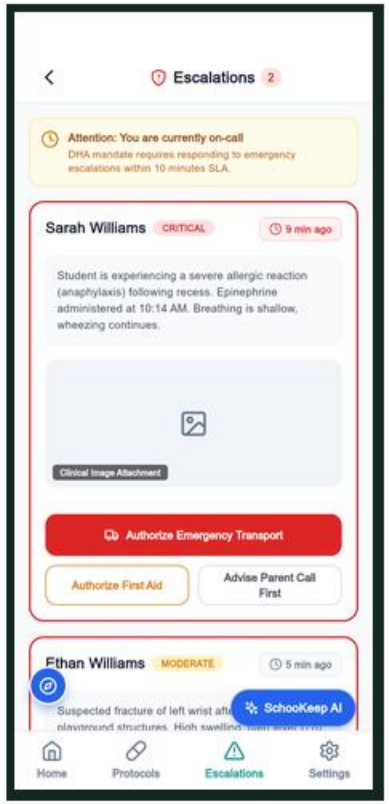

Represent physician schedules in the app.

Physician home

Protocol review

Escalation inbox

Keep parents part of the care loop

The parent app brings health, medication, and document workflows into a familiar mobile experience.

A family-facing home

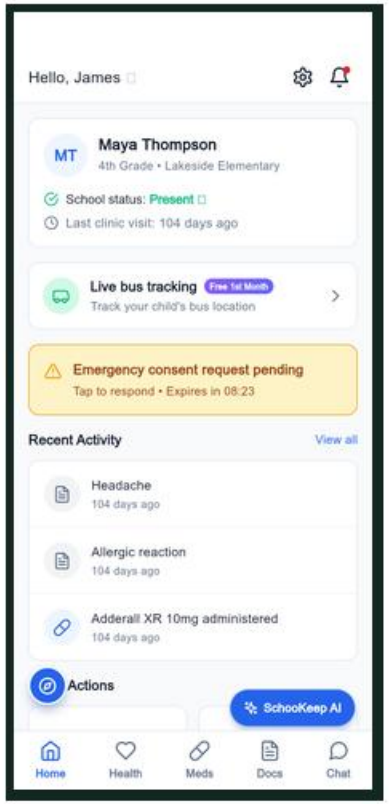

Give guardians a clear starting point for the school day.

Health and medication history

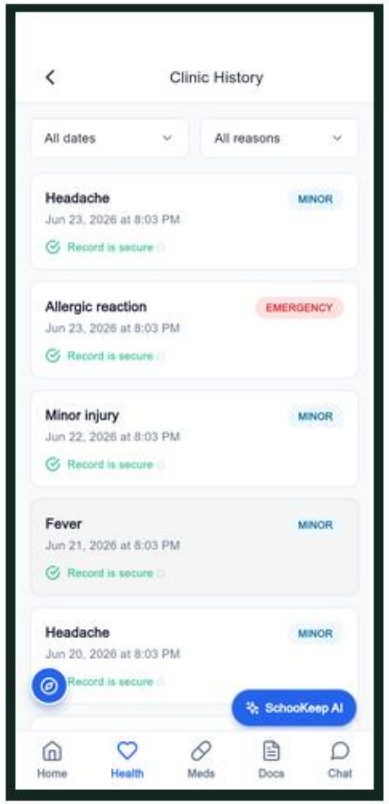

Keep the child's care activity visible to the family.

Documents in one place

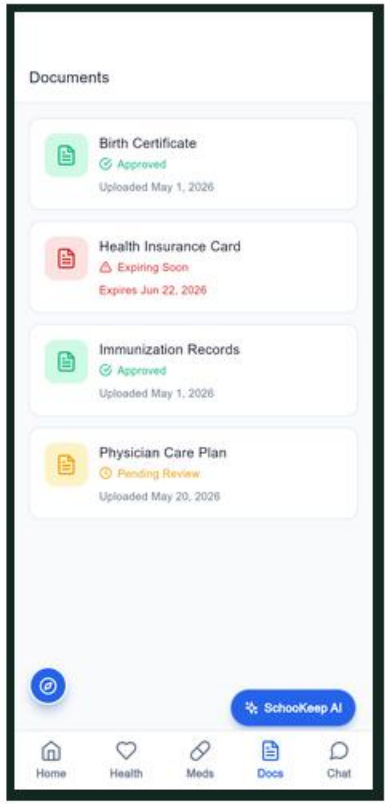

Provide an accessible path for school health paperwork.

Parent home

Health history

Documents

Connect a request to a response

Consent and authorized pickup screens show the link between school operations and guardians.

Emergency response

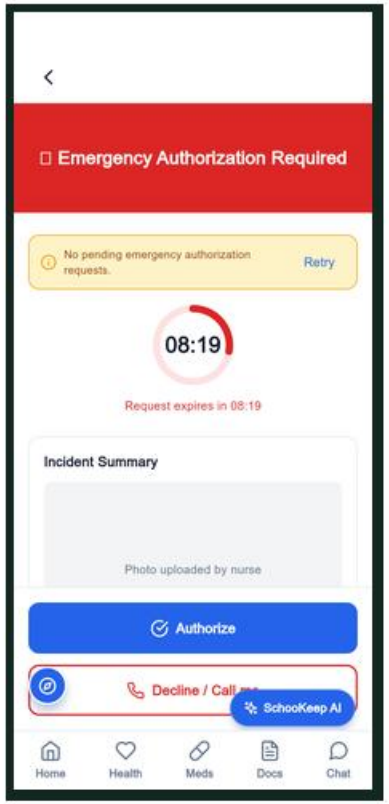

Provide a dedicated parent consent screen.

Authorized persons

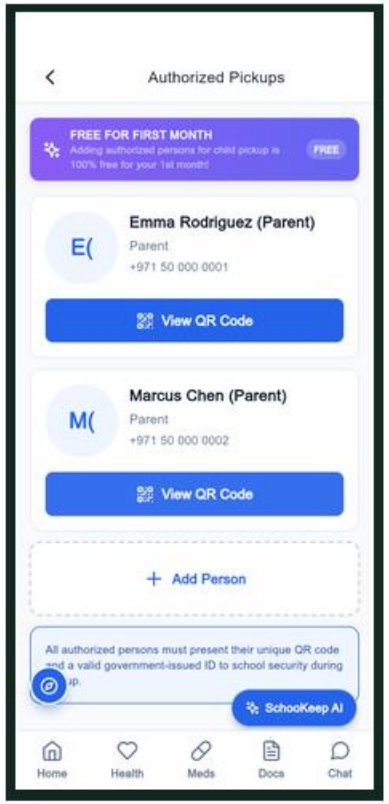

Organize the people approved for pickup.

QR presentation

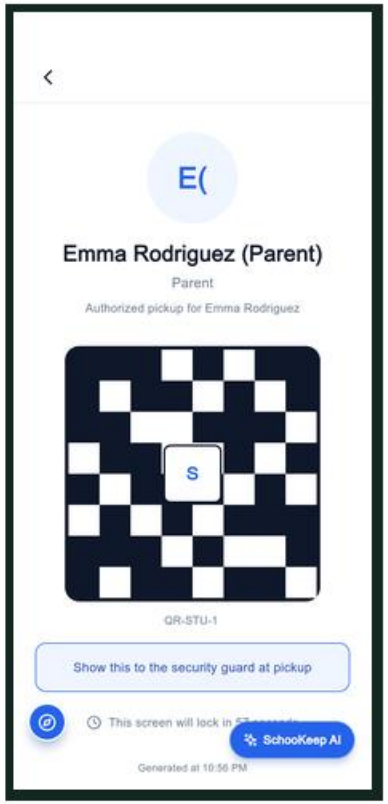

Represent a scannable pickup identity in the family app.

Consent response

Authorized persons

Pickup QR code

Bring health context into the school day

Teachers have focused views for attendance, health considerations, referrals, and exemptions.

Attendance context

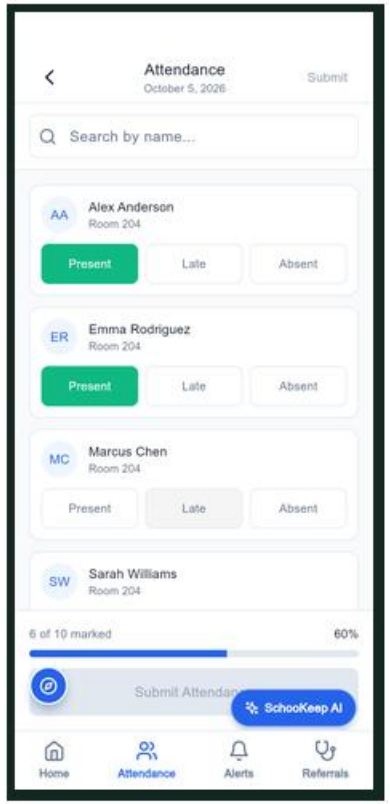

A classroom view supports daily operational awareness.

Health considerations

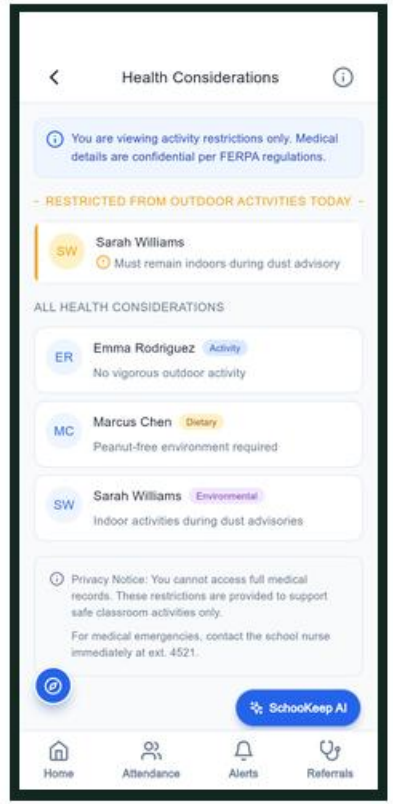

Keep relevant student needs visible to the teacher.

Referral workflow

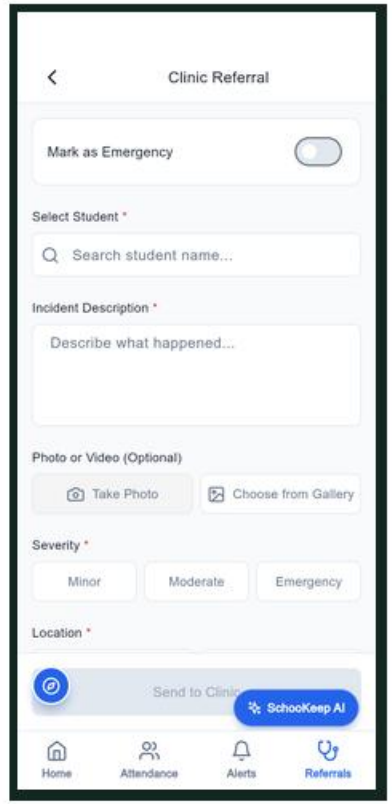

Offer a structured route into the school clinic.

Attendance

Health considerations

Clinic referral

Support arrival and departure handoffs

Security and transport have dedicated operational views.

Pickup verification

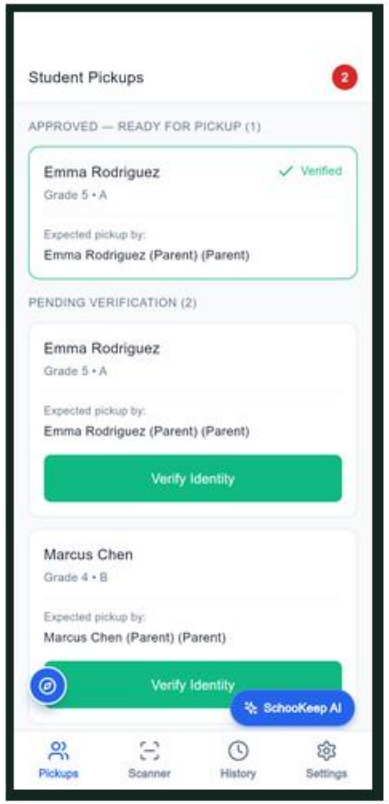

Queue and manual verification screens organize gate activity.

Transport operations

Route, boarding, and history workflows support the driver.

Shared responsibility

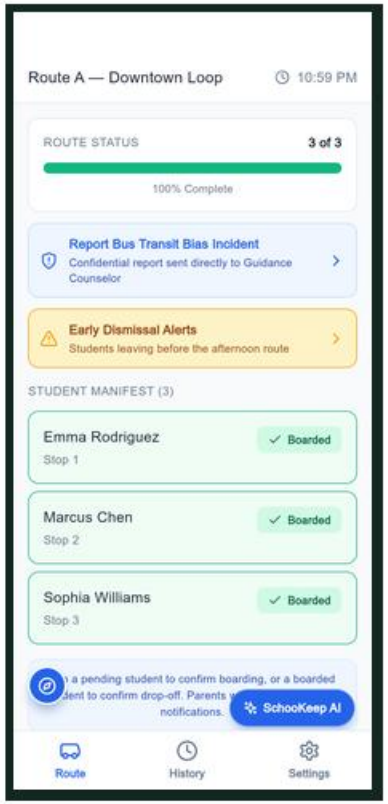

Connect the school, transport staff, and authorized guardians.

Pickup queue

Manual verification

Bus route

Make cafeteria decisions more informed

Allergen alerts and point-of-sale workflows extend the product beyond the clinic.

Allergen awareness

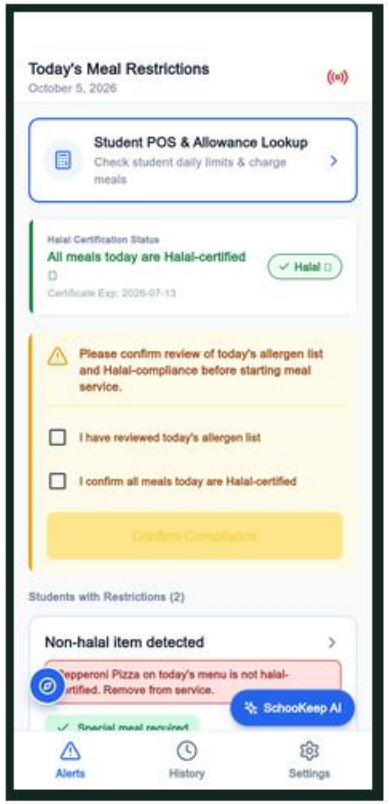

Provide the cafeteria with dedicated alert screens.

Daily operations

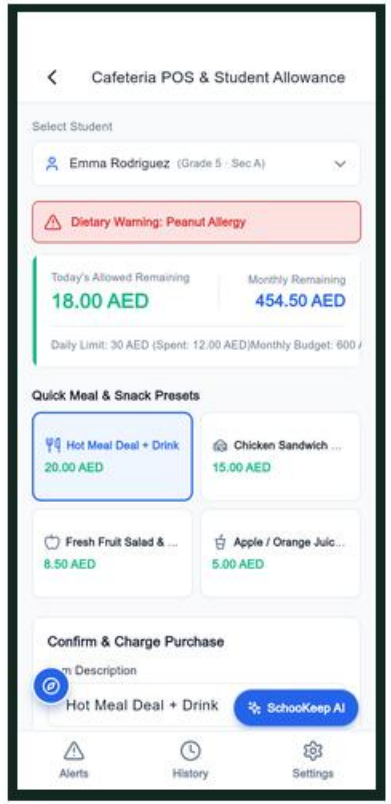

Bring point of sale into the staff experience.

Family budget visibility

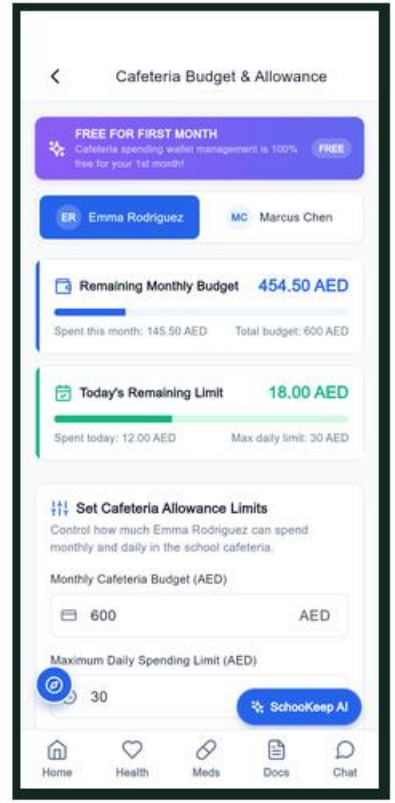

Represent cafeteria budgets in the parent app.

Cafeteria alerts

Point of sale

Family budget

Support the people behind each handoff

Counselor and secretary screens broaden the operational footprint.

Student support

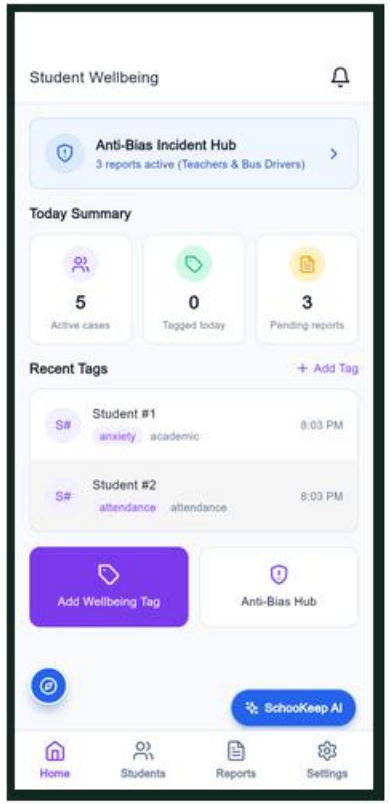

Counselor records and report workflows represent ongoing care.

Office coordination

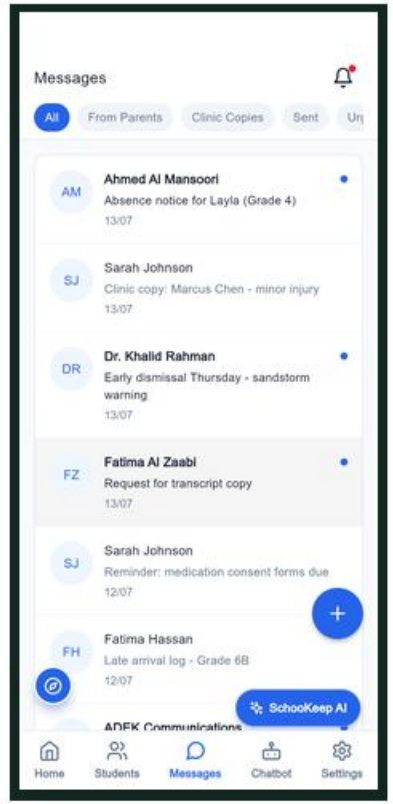

The secretary has student, messaging, and import views.

Triage and follow-up

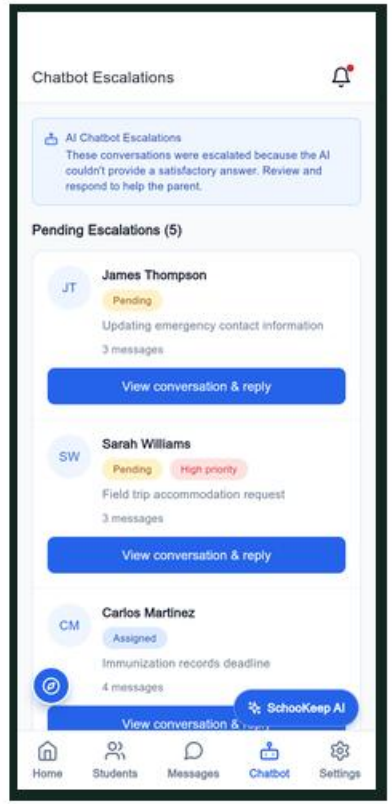

Queue screens make outstanding work visible.

Counselor dashboard

Office messaging

Chatbot queue

Make access and readiness visible

Permission, audit, and readiness views support accountable school operations.

Role permissions

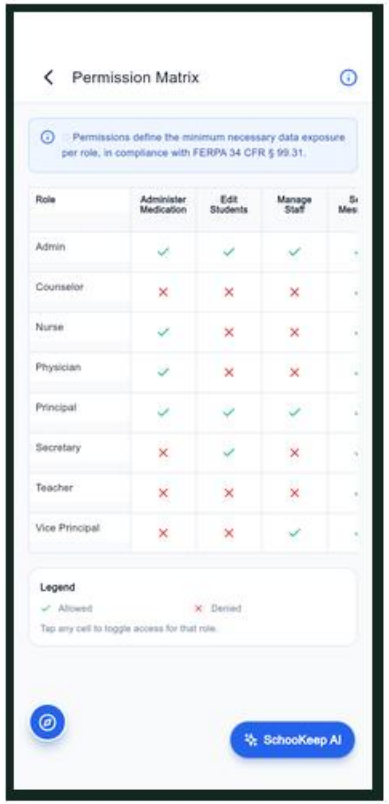

Show the access model in a dedicated matrix.

Audit visibility

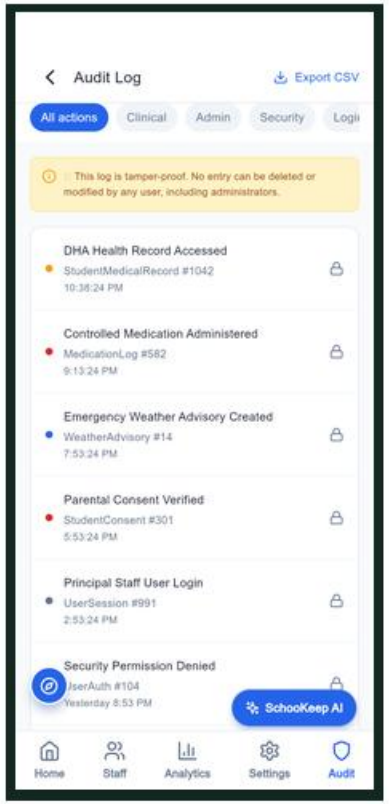

Provide a view of recorded system activity.

Clinic readiness

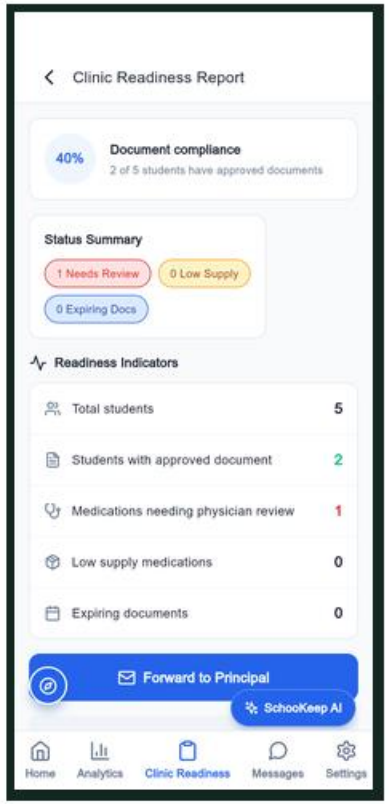

Give school operations a readiness and equipment workflow.

Permissions

Audit log

Clinic readiness

Designed for the school context

The app includes English/Arabic localization and contextual school system states.

Bilingual foundation

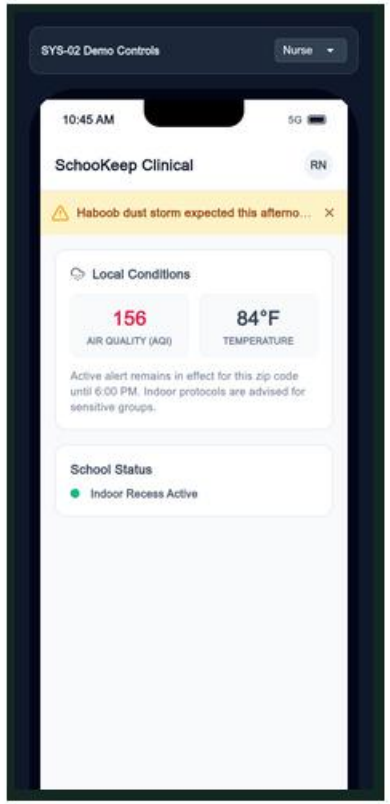

English and Arabic strings and right-to-left layouts are present in the codebase.

School-wide advisories

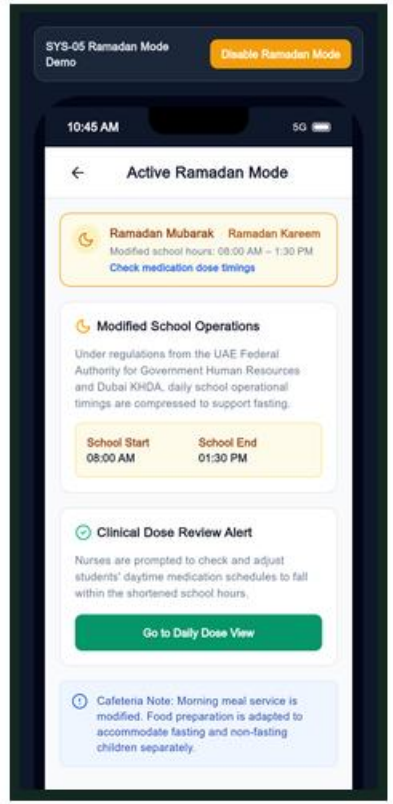

Weather advisory screens represent shared restrictions.

Contextual operating modes

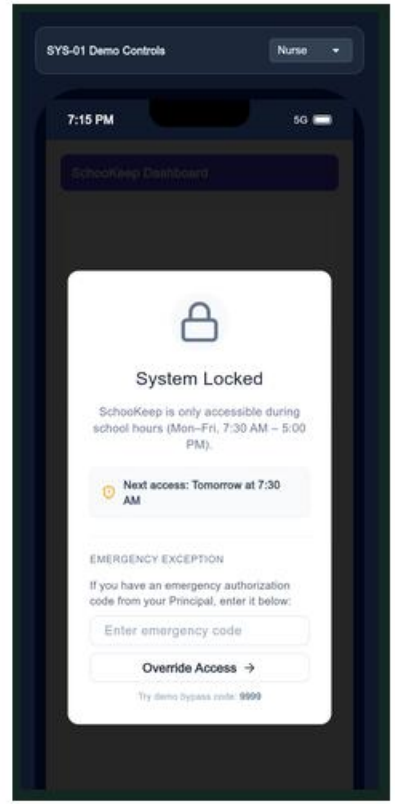

Ramadan and after-hours states are part of the experience.

Weather advisory

Ramadan mode

After-hours state

Start with a school-level subscription

A proposed model for validation, rather than committed pricing.

01

School license

An annual subscription priced by school size or student band. Validate willingness to pay in pilots.

02

Implementation

Offer setup, training, and rollout support. Scope integration work separately.

03

Group expansion

Expand from one school to a school group after demonstrating adoption and operating value.

Prove the workflow before scaling

An illustrative eight-week pilot with agreed measures and owners.

01

Weeks 1-2: Prepare

Map current workflows, confirm roles, review data handling, and establish a baseline.

02

Weeks 3-6: Operate

Pilot clinic, consent, and parent communications with a defined cohort and support cadence.

03

Weeks 7-8: Evaluate

Measure adoption, documentation completeness, consent response time, and handoff follow-through.

Find the right pilot school

Validate the value with the people who will use the system every day.

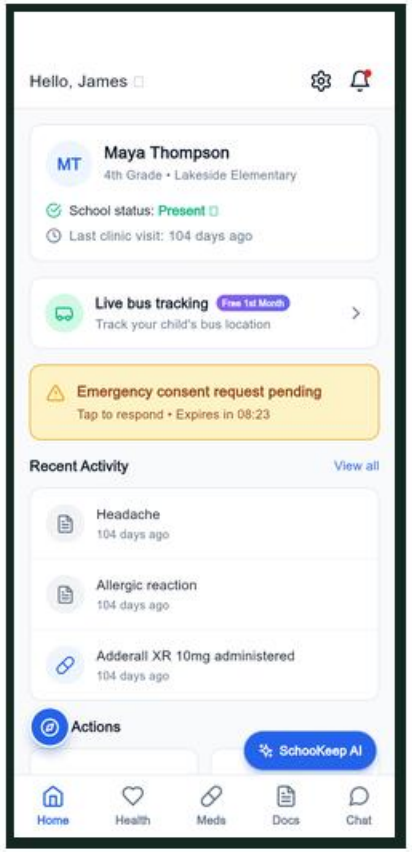

Seeking a design partner

A school leadership team, nurse, and parent cohort willing to shape the rollout and define success.

Agree the pilot scope.

Name an operational owner.

Choose the measures that matter.

What this presentation demonstrates

Product screenshots are evidence of the current app experience, not commercial or clinical outcomes.

Capture method

Flutter release web build; 393 x 852 mobile viewport; local seeded Laravel backend; supplied admin account. Original icon assets, with Arial fallback for network-loaded text fonts.

Presentation boundaries

Demo data is shown. Some flows use sample IDs or static states. External maps and services were not verified. Production deployment, clinical outcomes, security certification, traction, pricing, and integrations are not claimed.

Included: route-indexed screenshot library, browser gallery, and editable PowerPoint deck.
